

01 / NOTICE THE SIGNAL

What actually changed?

01

UNBOUND 2026: Okay. Now What?

Five decisions. Seven minutes. One next move.

I left UNBOUND with a lot of notes. Some great ideas. A few things I need to think about. And probably too many things I could start doing Monday morning.

Which is the problem. The hard part after a conference isn't finding another idea. It's deciding which one deserves to become real.

START HERE. NOT WITH WHAT LOOKED IMPRESSIVE ON STAGE.

What did I learn that changes what we believe, what we do, or what our customers are doing?

Put everything else in the parking lot.
Interesting isn't the same as important.

TAKE THIS FORWARD

One meaningful change.

NEXT / Find where that change meets friction in your work.

02 / LOCATE THE BOTTLENECK

Where is the friction?

02

Before adding another tool, find the part of the work that already hurts.

WHERE DOES IT STALL?

More content, but creative can't keep up.
Campaigns stuck in revisions.
Everyone experimenting with AI differently.
More variations, but the brand is starting to wander.
A brief that's six Slack messages, an email and somebody saying, "You know what I mean."

Start with the friction. Technology is much more useful when it has a specific problem to solve.

TAKE THIS FORWARD

One specific point of friction.

NEXT / Decide which part AI can handle and which part needs you.

What should AI actually own?

03

Don't ask: "Where can we use AI?" That's too big.

What repetitive part could AI handle reliably enough that a human doesn't need to spend time on it?

AI: REPEATABLE WORK

Research?
First drafts? Resizing?
Variations? Summaries?
Organizing feedback?
Documentation?

HUMANS: THE CALL

Taste. Judgment. Context.
Empathy. Art direction.

"No. That's technically correct and still terrible."

Then make the opposite list. That's your human layer. Protect it.

TAKE THIS FORWARD

A clear handoff between AI and a human.

NEXT / Test that handoff on one annoying thing.

04 / RUN ONE EXPERIMENT

Pick one move.

04

30

DAYS

You don't need an AI transformation on Monday.

Pick one annoying thing. Define what better looks like.

MAYBE

- Cut campaign revision cycles from five rounds to three.
- Produce five useful ad variations without five times the design work.
- Turn one strong idea into a usable campaign system.
- Create one repeatable brief Marketing and Creative can live with.
- Automate one task nobody should be doing manually anymore.

TAKE THIS FORWARD

One problem. One experiment. One measure.

NEXT / Set the boundaries before you scale. Then learn from it.

Put guardrails around it.

05

Speed without direction just gets you lost faster.

Before scaling anything, decide what cannot move.

- ☐ Your voice.
- ☐ Your visual identity.
- ☐ Your standards.
- ☐ Your approval points.
- ☐ The facts that must be right.
- ☐ The moments where a human needs to make the call.

AI can help create more. A system makes sure "more" still looks and sounds like you.

TAKE THIS FORWARD

A repeatable process that still feels like you.

NEXT / Turn the experiment into something the team can react to.

06 / SHIP. LEARN. REPEAT.

Then make something.

06

Eventually the strategy has to become work.

A campaign. A page. A presentation. An ad.
A video. A test. A better workflow.

Something real enough that your team can react to it.
That's where I think a lot of the interesting work starts.

If you came back with 47 ideas, don't start 47 initiatives.
Pick one thing that's stuck. Make it better. See what happens.
Then take the next step.

Still sorting through it? Me too.

Creative process, content, brand systems, campaigns or AI.
I'm happy to compare notes. - Scott Vigneault / VigVibe
