

01 / NOTICE THE SIGNAL

What actually changed?

01

THE MONDAY-AFTER QUESTION

UNBOUND 2026: Okay. Now What?

Five decisions.
Seven minutes.
One next move.

I left UNBOUND with a lot of notes. Some great ideas. A few things I need to think about. And probably too many things I could start doing Monday morning.

Which is the problem.

The hard part isn't finding another idea. It's deciding which one deserves to become real.

START HERE

What changes what we believe, what we do, or what customers do?

Put the rest in the parking lot. Interesting isn't the same as important.

TAKE THIS FORWARD

One meaningful change.

NEXT / Find where that change meets friction in your work.

02 / LOCATE THE BOTTLENECK

Where is the friction?

02

Find the part that already hurts.

Before adding another tool, find a specific problem for it to solve.

Start with the friction.

Technology is much more useful when it has a specific problem to solve.

WHERE DOES IT STALL?

More content. Creative can't keep up.

Campaigns stuck in revisions.

Everyone trying AI differently.

More variations. The brand wanders.

A brief in six Slack messages, an email and "You know what I mean."

BRIEF

MAKE

REVIEW

SHIP

TAKE THIS FORWARD

One specific point of friction.

NEXT / Decide which part AI can handle and which part needs you.

NOTICE

LOCATE

ASSIGN

TEST

PROTECT

MAKE

03 / ASSIGN THE WORK

What should AI actually own?

03

What repetitive part could AI handle reliably?

Don't ask where you can use AI. Ask where a human no longer needs to spend time.

AI DOES

Research? First drafts?

Resizing? Variations?

Summaries? Feedback?

Documentation?

HUMANS DECIDE

Taste. Judgment. Context.

Empathy. Art direction.

"No. That is technically correct and still terrible."

That's your human layer. Protect it.

TAKE THIS FORWARD

A clear handoff between AI and a human.

NEXT / Test that handoff on one annoying thing.

04 / RUN ONE EXPERIMENT

Pick one move.

04

30 DAYS

You don't need an AI transformation on Monday.

01 / PROBLEM

Pick one annoying thing.

Campaigns take five revision rounds.

02 / EXPERIMENT

Try one repeatable change.

Use one brief Marketing and Creative agree on.

03 / MEASURE

Define what better looks like.

Get revision cycles from five rounds to three.

Other moves: five useful ad variations; one usable campaign system; or one task nobody should do manually anymore.

TAKE THIS FORWARD

One problem. One experiment. One measure.

NEXT / Set the boundaries before you scale. Then learn from it.

05 / PROTECT WHAT MATTERS

Put guardrails around it.

05

Speed without direction gets you lost faster.

Before scaling anything, decide what cannot move.

WHAT PEOPLE EXPERIENCE

- Your voice.
- Your visual identity.
- Your standards.

WHAT PEOPLE CHECK

- Your approval points.
- The facts that must be right.
- Where a human makes the call.

AI can help create more. A system makes sure "more" still looks and sounds like you.

TAKE THIS FORWARD

A repeatable process that still feels like you.

NEXT / Turn the experiment into something the team can react to.

06 / SHIP. LEARN. REPEAT.

Then make something.

06

Strategy has to become work.

A campaign. A page.
A presentation. An ad.
A video. A test.
A better workflow.

Something real enough that your team can react to.

That's where a lot of the interesting work starts.

Still sorting through it? Me too. Let's compare notes.
Scott Vigneault / VigVibe

47 IDEAS. ONE NEXT MOVE.

Don't start 47 initiatives.

Pick one thing that's stuck.

Make it better.

See what happens.

Then take the next step.

GOT SOMETHING STUCK?

Let's make the next move.
